30-DAY REPORT FOR YOUR LISTINGS

DETAILED ANALYSIS: CHANNEL COMPARISON CHART

This report shows a comparison of activity generated from your listings online. Data is collected from the following two sources to report the Inquiries: 1) Inquiries from ListHub hosted property pages are included. 2) Inquiries generated directly from the channel Web sites are included for channels which have chosen to provide ListHub with this data. Inquiry data generated on the brokerage Web site is not included in the report.

Terms are defined on the last page of this report.

Your Listing Asset Management Company

30-DAY REPORT FOR YOUR LISTINGS

EXPLANATION OF TERMS

→ Explanation of Terms

**Agent ID** - Each agent has a unique user ID per MLS and per office. Since it is possible for some agents to hold more than one agent ID, the ID is included for the purpose of distinction.

**Channel labeled "Organic"** - an instance when the consumer was taken to the property page hosted by ListHub by a means other than one of the channels, such as when the consumer searches for a specific property address in a search engine and is taken directly to the property page.

**Click-Throughs (Visits)** - occurs when a consumer is redirected to the property page for that listing (for example the ListHub hosted property page or property page on the brokerage Web site).

**Inquiries** - an event where the consumer starts an interaction with the broker or agent using one of the links on the ListHub hosted property page or by using a link on the channel Web site. This would result in the broker/agent receiving an email with a return email address for the consumer. The number of times a consumer clicked on "Click to view phone number" is also measured and reported under "Inquiries".

**Listing Count** - the number of active listings that each agent has on the date of the report, or the number of active listings in a property category on the date of the report.

**Listing Inventory** - the total active listings that are being pulled from the MLS each month.

**N/A on Property Views** - Reporting on Property View data requires that the Internet marketing channel shares detailed information on the number of times consumers accessed the property view for each property. The n/a indicates that property view data is not yet available for the site.

**Performance Rank** - ListHub uses unique algorithms to determine the performance of listings within certain property categories as well as the performance of listings for each agent. This algorithm factors in the number of listings, the number of visits/click-throughs, and the number of inquiries.

**Property Views** - occurs when a consumer clicks on the thumbnail view of a property to view more details, while still on the Internet marketing channel Web site. It is from the property view that the consumer has access to the link for even more property information which would result in a "visit or click-through" when clicked.

Property views, visits, and inquiries are based on the number of listings displayed by the channel. If the channel displays a listing provided by a source other than ListHub or if a listing is not displayed due to an uploading error, the activity data for that listing is not included in ListHub reports.
